

## Role

We are urgently looking for a Azure DevOps Consultant/Engineer to join the team, ideally you will be from a development or Sys Admin background, you will aid project teams in the adoption and extension of standard CI/CD pipelines, test automation harnesses, automated deployments and assisting with project and production issue triage and resolution.

This role joins an existing remote team across multiple projects and clients, supporting both BAU and new build activities as required in an Azure environment.

## Purpose

- Work on projects of varying size and complexity, ensuring common standards are implemented, enhanced and adhered to.
- Ensure Automated build, test and deployment tools and processes are in place
- Build and configure environments
- Deploy and configure solutions
- Define and implement reusable CI/CD components
- Perform script maintenance and update
- Create requirements and procedures for implementing routine maintenance
- Identify, agree and implement new ways of working to support changing project needs and continuous improvement.

## Core Competencies

- Has solid experience developing with Microsoft technologies
- Ability to liaise effectively with other teams
- Ability to work towards challenging deadlines, delivering high quality
- Strong problem solving and analytical skills
- Ability to work independently, but must enjoy collaborating as part of matrix managed teams
- Ability to prioritise tasks from multiple sources whilst demonstrating a degree of empathy

## Essential skills & experience

- Knowledge of Microsoft web services
- Sound working knowledge of Git (or similar source control system)
- Sound working knowledge of SQL Server
- Sound scripting skills (Powershell, Bash or similar)
- Building, deploying, monitoring and troubleshooting applications in virtualised environments

## Desirable skills & experience

- Experience of building & deploying .NET services & applications
- Ability to understand & utilise new technology is desirable
- Behaviour Driven Development
- Azure DevOps
